Marsden's Book of Movement Disorders

AUTHORS IVAN DONALDSON, C. DAVID MARSDEN,
SUSANNE SCHNEIDER, KAILASH BHATIA

This book represents the final work of the late Professor C. David Marsden, and serves as the 'clinical Bible' for the management of movement disorders. Extensively illustrated with many original photographs and diagrams of historical significance that have not been published previously, it is an essential reference not just for movement disorder specialists and researchers, but also for clinicians who care for patients with these disorders.

We're pleased to announce the launch of our preview site for *Oxford Medicine Online*. Please log on as usual, unless you are an Athens or Shibboleth user in which case please email onlinesubscriptions@oup.com to be given a username and password. Many other improvements and enhancements are planned, some of which are taking place in this preview period as we continue to develop and perfect the site.

An 18-year-old man presents with swelling of his face and lips. He reports three previous episodes of facial paralysis on either side since childhood. Examination reveals marked swelling of his entire face with peripheral facial weakness bilaterally (Fig. 34-1). He reports that his father also had intermittent episodes of facial weakness and swelling. Examination of his tongue reveals deep furrowing (Fig. 34-2) but no other abnormalities.

Melkersson-Rosenthal syndrome: A review of 36 patients

[Richard M. Greene, MD](#), [Roy S. Rogers III, MD](#)

Department of Dermatology, Mayo Clinic and Mayo Foundation, Rochester, Minnesota

Abstract

Abstract + References

PDF

References

The Melkersson-Rosenthal syndrome is an uncommon condition of uncertain pathogenesis and cause. The classic triad of signs includes recurrent orofacial edema, recurrent facial nerve palsy, and lingua plicata. We retrospectively reviewed the medical records of 36 patients (24 women and 12 men) with elements of the Melkersson-Rosenthal syndrome. The complete triad was present in 9 (25%) patients. Orofacial involvement was the dominant feature; it occurred in all 36 patients and was the presenting sign in 15 (42%). Lingua plicata occurred in 18 (50%) patients, and peripheral facial paralysis was present in 17 (47%). Fourteen biopsy specimens were obtained, all from the orofacial region. Eight specimens revealed the classic pathologic picture of granulomatous cheilitis. No etiologic agent was identified in any of the patients. Diagnosis is difficult when all features of the triad are not present. A conservative treatment approach is recommended.

Melkersson-Rosenthal syndrome. Note deep (other clinical descriptors include plicated, scrotal, or geographic) furrowing of the

Now?

of paralysis, facial edema, and a deeply furrowed (also known as geographic, scrotal, or plicated) Melkersson-Rosenthal syndrome. The condition is rare. Women are affected three times as often as men. The pathogenesis of this syndrome is unknown. Biopsy of skin tissue reveals perivascular infiltrates of lymphocytes and histiocytes as well as granulomas and multinucleated giant cells. Steroids have been used with good response. The effectiveness of surgery to release pressure on the facial nerves has not been established. Many people have deep fissuring of the tongue with no history of facial swelling or palsy. Melkersson-Rosenthal syndrome should be included in the differential diagnosis of recurrent facial palsy, which can also be seen in Lyme disease and lymphoma.

ol 21 : 1263–1270,

729, 1990.

K Key Points to Remember

- Melkersson-Rosenthal syndrome is characterized by the triad of recurrent facial paralysis, facial swelling, and a deeply fissured tongue.
- Melkersson-Rosenthal syndrome is a rare cause of recurrent peripheral facial palsy; other causes are Lyme disease, sarcoidosis, and lymphoma.
- Many people have a deeply fissured tongue with no history of facial swelling or weakness.

Annotate

Figure 34-2 Melkersson-Rosenthal syndrome. Note deep (other clinical descriptors include plicated, scrotal, or geographic) furrowing of the tongue.
